NOTE: Battery groups have their own specific designation according to their chemistry (including weight), which is reported when portable built-in or attached batteries are placed on the market.			

*Ecomodulation - Ecomodulation criteria

With regard to Section 3, paragraph (2), letter q) of Act No. 542/2020 Coll., on end-of-life products, as amended, eco-modulation takes into account the impact of the selected product on the environment throughout its entire life cycle, in particular its durability, repairability, reusability, recyclability, content of hazardous substances, and compliance with requirements set by other legal regulations. The eco-modulation criteria are set out below, on the basis of which the degree of compliance will be assessed, on the basis of which it is possible to obtain an eco-modulated recycling contribution.

Group	Eco-modulation	Method of proof
Portable batteries and accumulators	Not for single use.	Manufacturer's declaration of conformity. Verification by inspection.
	They do not contain mercury ¹ and/or cadmium ² .	Document that verifies compliance with the condition. Verified by checking the facts.
	Contain at least 85% by weight of recycled lead, and/or 12% by weight of recycled cobalt, and/or 4% by weight of recycled nickel, and/or 4% by weight of recycled zinc, and/or 4% by weight of recycled lithium.	A document that verifiably proves compliance with the condition. Verification of the facts during inspection.

**The document cannot be replaced by a sworn statement.
